Table D. Troubleshooting the Spectra V Dome System

Problem	Possible Causes	Suggested Resolution
Dome does not start properly after installation.	The circuit board fuse may need to be replaced.	Check the fuse on the circuit board inside the back box for continuity. Replace the fuse if needed.
	The back box may not be receiving proper voltage.	Check the wiring with a volt meter to ensure that the back box is receiving proper voltage.
Dome starts correctly, but you do not have accurate control.	Switch settings on the dome drive are set incorrectly.	Check the signal with a volt meter or an oscilloscope. NOTE: This step will not apply if you are using Coaxitron control. Ensure that the switch settings on the dome drive are set correctly (refer to <i>Switch Settings</i> on page 3.) Ensure that the proper back box wiring was used and that the polarity of wiring is correct.
No video is displayed.	Power is not connected.	Check the power connector.
	Video cable is not connected.	Check the video connector.
	Video UTP cable is not connected.	Check the UTP connector.
	TXB-IP module is not inserted properly in the back box.	If you are using a Spectra V IP dome system, reinstall the TXB-IP module. Make sure the pins on the module are inserted correctly.
	Video format switch set incorrectly.	Ensure that the NTSC/PAL switch setting (refer to the Switch Settings on Page 3) match the format of the video encoder being used.
Spectra V information (model, firmware, Pelco P and Pelco D protocol addresses, and communication settings) does not appear after the configuration cycle.	The unit cannot complete its configuration cycle.	Ensure that nothing is physically obstructing the pan and tilt movement of the dome drive.
The displayed video is scrambled.	Video UTP wires are incorrectly installed in the back box.	Verify that the video UTP cable is wired correctly to the UTP connector on the back box circuit board. The blue wire should be connected to the positive terminal, and the gray wire should be connected to the negative terminal.
